Eisenhower Matrix

WikiTrail | CS 193 | Revised MVP Planning

IMPORTANT

URGENT

DO | MVP (V1.0)

- Search Wikipedia and retrieve an article introduction.
- Show numbered related hyperlinks and open a selected article.
- Display the research trail and navigate back to earlier articles.

NOT URGENT

SCHEDULE | V2.0+

- Add a Java Swing interface and interactive graph.
- Attach notes and save/reopen sessions in JSON files.
- Use AI to explain links to the starting research question.
- Generate summaries and recommend related articles.

DELEGATE | USE LIBRARIES

- Use Java HttpClient for API requests.
- Use Gson to parse JSON responses.
- Use Scanner for terminal input.
- Use the public Wikipedia API instead of web scraping.

DELETE | CUT FROM SCOPE

- Build social accounts and collaborative research maps.
- Create separate mobile applications.
- Train a custom AI model on Wikipedia articles.
- Add points, achievements, or research streaks.
- Add real-time multi-user collaboration and chat.

MVP GOAL

Search Wikipedia, follow related links, and retrace the full research path in a reliable Java terminal program.
